TECHNICAL

The whiteboard surface is manufactured from a 0.3mm zinc plated steel sheet. Painted with a protective base coat and then with a dry erase acrylic top coat, then passed through on rollers into an industrial oven and baked at approx. 750 degrees. This process cures the paint for a strong and reliable, white glossy writing surface. The plated steel makes the whiteboard surface material magnetic receptive.

20mm frame with 4mm lip sits against the wall with invisible fixings making the board appear seamless and integrated into any space.

The standard whiteboard surface measures 4-5 on the Mohs scale, and is 'softer' in comparison to a vitreous enamel (porcelain) surface, which has a hardness of around 8.5 and is highly scratch resistant (Diamonds measure at 10).

Dry erasable using good quality whiteboard markers and can be cleaned with non-abrasive erasers and soft cloths. Regular cleaning of the surface is recommended for best results with approved alcohol based cleaning solutions.
